

EGX360 - Intelligent Stock Market Analysis and Forecasting Platform

AI-Powered EGX30 Forecasting Platform

Aim& Rationale

- The Problem:** Egypt's retail investors make decisions with no real AI support.
- The Goal:** EGX360 predicts market moves before they happen — with 93% accuracy
- Rationale:** Built on AWS cloud — scales to any market, any volume, in real time.

Stacking Ensemble

Lessons Learned

- Technical Expertise**
 - Stacking:** Optimized XGBoost & LightGBM base learners.
 - Optuna:** Bayesian optimization for robust model stability
 - Cloud:** AWS & Supabase deployment.

- Core Knowledge**
 - Quant:** Technical & Macro correlations.
 - NLP:** Hugging Face sentiment analysis.

Future Work

- Live Brokerage:** Transitioning from paper-trading to real-world execution via local brokerage APIs.
- Market Expansion:** Scaling the Stacking Ensemble to forecast the EGX70 and alternative assets.
- Explainable AI (XAI):** Integrating SHAP values to reveal the exact macroeconomic drivers behind AI signals.

Conclusion

By fusing local macroeconomic indicators with a Stacking Ensemble, EGX360 achieves a 93% directional accuracy. It successfully bridges the gap between raw market noise and actionable intelligence, delivering a production-ready financial ecosystem for retail investors.
